Question 1

Correct

Marked out of 5.00

1. Final Variable:

- Once a variable is declared **final**, its value cannot be changed after it is initialized.
- It must be initialized when it is declared or in the constructor if it's not initialized at declaration.
- It can be used to define constants

```
final int MAX_SPEED = 120; // Constant value, cannot be changed
```

2. Final Method:

- A method declared **final** cannot be overridden by subclasses.
- It is used to prevent modification of the method's behavior in derived classes.

```
public final void display() {  
    System.out.println("This is a final method.");  
}
```

3. Final Class:

- A class declared as **final** cannot be subclassed (i.e., no other class can inherit from it).
- It is used to prevent a class from being extended and modified.
- ```
public final class Vehicle {
 // class code
}
```

**Given a Java Program that contains the bug in it, your task is to clear the bug to the output.**

**you should delete any piece of code.**

**For example:**

| Test | Result                                                                |
|------|-----------------------------------------------------------------------|
| 1    | The maximum speed is: 120 km/h<br>This is a subclass of FinalExample. |

**Answer:** (penalty regime: 0 %)

Reset answer

```
1 class FinalExample {
2
3
4 int maxSpeed = 120;
5
6 // Final method
7 public final void displayMaxSpeed() {
8 System.out.println("The maximum speed is: " + maxSpeed + " km/h");
9 }
10 }
11
12 class SubClass extends FinalExample {
13
14 /* public void displayMaxSpeed() {
15 System.out.println("Cannot override a final method");
16 }*/
17
18 // You can create new methods here
19 public void showDetails() {
20 System.out.println("This is a subclass of FinalExample.");
21 }
22 }
23
```

```
24 class prog {
25 public static void main(String[] args) {
26 FinalExample obj = new FinalExample();
27 obj.displayMaxSpeed();
28
29 SubClass subObj = new SubClass();
30 subObj.showDetails();
31 }
32 }
33
34
```

|   | Test | Expected                                                              | Got                                                                   |   |
|---|------|-----------------------------------------------------------------------|-----------------------------------------------------------------------|---|
| ✓ | 1    | The maximum speed is: 120 km/h<br>This is a subclass of FinalExample. | The maximum speed is: 120 km/h<br>This is a subclass of FinalExample. | ✓ |

Passed all tests! ✓

## Question 2

Correct

Marked out of 5.00

Create a base class Shape with a method called calculateArea(). Create three subclasses: Circle, Rectangle, and Triangle. Override the calculateArea() method in each subclass to calculate and return the shape's area.

In the given exercise, here is a simple diagram illustrating polymorphism implementation:

```

abstract class Shape {
 public abstract double calculateArea() ;
}

```

System.out.printf("Area of a Triangle :%.2f%n",((0.5)\*base\*height)); // use this statement

sample Input :

```

4 // radius of the circle to calculate area PI*r*r
5 // length of the rectangle
6 // breadth of the rectangle to calculate the area of a rectangle
4 // base of the triangle
3 // height of the triangle

```

**OUTPUT:**

**Area of a circle :50.27**

**Area of a Rectangle :30.00**

**Area of a Triangle :6.00**

**For example:**

| Test | Input                         | Result                                                                             |
|------|-------------------------------|------------------------------------------------------------------------------------|
| 1    | 4<br>5<br>6<br>4<br>3         | Area of a circle: 50.27<br>Area of a Rectangle: 30.00<br>Area of a Triangle: 6.00  |
| 2    | 7<br>4.5<br>6.5<br>2.4<br>3.6 | Area of a circle: 153.94<br>Area of a Rectangle: 29.25<br>Area of a Triangle: 4.32 |

**Answer:** (penalty regime: 0 %)

```

1 import java.util.Scanner;
2 interface Playable {
3 void play();
4 }

```

```

5 class Football implements Playable {
6 String name;
7 public Football(String name) {
8 this.name = name;
9 }
10 @Override
11 public void play() {
12 System.out.println(name + " is playing football");
13 }
14 }
15 class Volleyball implements Playable {
16 String name;
17 public Volleyball(String name) {
18 this.name = name;
19 }
20 @Override
21 public void play() {
22 System.out.println(name + " is playing volleyball");
23 }
24 }
25 abstract class Shape {
26 public abstract double calculateArea();
27 }
28 class Rectangle extends Shape {
29 double length;
30 double breadth;
31 public Rectangle(double length, double breadth) {
32 this.length = length;
33 this.breadth = breadth;
34 }
35 @Override
36 public double calculateArea() {
37 return length * breadth;
38 }
39 }
40 class Triangle extends Shape {
41 double base;
42 double height;
43 public Triangle(double base, double height) {
44 this.base = base;
45 this.height = height;
46 }
47 @Override
48 public double calculateArea() {
49 return 0.5 * base * height;
50 }
51 }
52 class Circle extends Shape {

```

|   | Test | Input                         | Expected                                                                           | Got                                                                                |   |
|---|------|-------------------------------|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|---|
| ✓ | 1    | 4<br>5<br>6<br>4<br>3         | Area of a circle: 50.27<br>Area of a Rectangle: 30.00<br>Area of a Triangle: 6.00  | Area of a circle: 50.27<br>Area of a Rectangle: 30.00<br>Area of a Triangle: 6.00  | ✓ |
| ✓ | 2    | 7<br>4.5<br>6.5<br>2.4<br>3.6 | Area of a circle: 153.94<br>Area of a Rectangle: 29.25<br>Area of a Triangle: 4.32 | Area of a circle: 153.94<br>Area of a Rectangle: 29.25<br>Area of a Triangle: 4.32 | ✓ |

Question 3

Correct

Marked out of 5.00

As a logic building learner you are given the task to extract the string which has vowel as the first and last characters from the given array of Strings.

Step1: Scan through the array of Strings, extract the Strings with first and last characters as vowels; these strings should be concatenated.

Step2: Convert the concatenated string to lowercase and return it.

If none of the strings in the array has first and last character as vowel, then return no matches found

input1: an integer representing the number of elements in the array.

input2: String array.

Example 1:

input1: 3

input2: {"oreo", "sirish", "apple"}

output: oreoapple

Example 2:

input1: 2

input2: {"Mango", "banana"}

output: no matches found

Explanation:

None of the strings has first and last character as vowel.

Hence the output is no matches found.

Example 3:

input1: 3

input2: {"Ate", "Ace", "Girl"}

output: ateace

For example:

| Input                  | Result           |
|------------------------|------------------|
| 3<br>oreo sirish apple | oreoapple        |
| 2<br>Mango banana      | no matches found |
| 3<br>Ate Ace Girl      | ateace           |

Answer: (penalty regime: 0 %)

```
1 import java.util.Scanner;
2
3 abstract class Operations {
4 public boolean isVowel(char c) {
5 return c == 'a' || c == 'e' || c == 'i' || c == 'o' || c == 'u';
6 }
7
8 public boolean hasVowelEnds(String s) {
9 return (isVowel(s.charAt(0)) && isVowel(s.charAt(s.length() - 1)));
10 }
```

```
11 }
12
13 class Concatenate extends Operations {
14 public String ans = "";
15
16 Concatenate(String[] words) {
17 for (String s : words) {
18 if (hasVowelEnds(s.toLowerCase())) {
19 ans += s.toLowerCase();
20 }
21 }
22 }
23
24 public String getAnswer() {
25 if (ans.isEmpty()) return "no matches found";
26 return ans.trim();
27 }
28 }
29
30 class prog {
31 public static void main(String args[]) {
32 Scanner scan = new Scanner(System.in);
33 int n = scan.nextInt();
34 scan.nextLine();
35 String[] words = scan.nextLine().split(" ");
36 Concatenate cn = new Concatenate(words);
37 System.out.println(cn.getAnswer());
38 scan.close();
39 }
40 }
41
```

|   | Input                  | Expected         | Got              |   |
|---|------------------------|------------------|------------------|---|
| ✓ | 3<br>oreo sirish apple | oreoapple        | oreoapple        | ✓ |
| ✓ | 2<br>Mango banana      | no matches found | no matches found | ✓ |
| ✓ | 3<br>Ate Ace Girl      | ateace           | ateace           | ✓ |
